Full installation and deployment

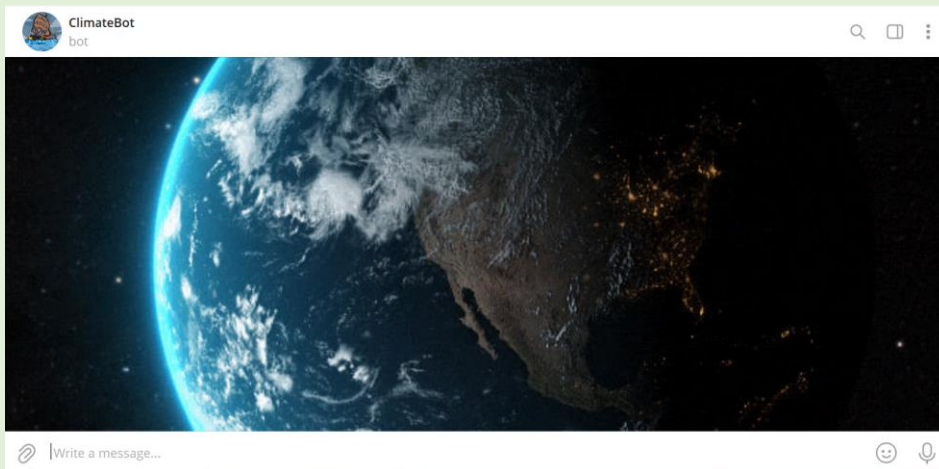

Follow this section only if you wish to deploy the system locally:

- Please note for setting up this bot to operate on your system you need the following things
 - System Requirements and Dependencies:
 - Browser: Google Chrome
 - Windows 7 and above OS
 - Works on both 32-bit as well as 64-bit systems(Laptop/PC)
 - Works directly on Android/Apple phones
- The chatbot can be accessed directly using this link <https://t.me/ClimateSGBot> . If you have Telegram then you can access it directly.
- For testing shared the chatbot on WhatsApp, workable model

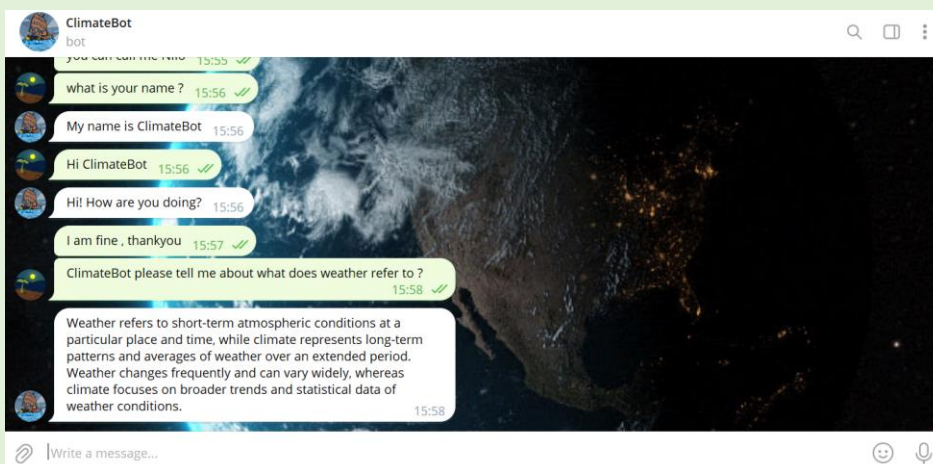

- The setup is straight forward if you like to set-up this by yourself on your system, you need to have:
 - Google Account
 - Telegram Account
- The main thing here is setting up the knowledge base in DialogFlow for Climate related questions to be setup as FAQs. You can use the Knowledge Base documents that I have created to test your setup that you simply need to upload to GoogleDialogFlow >Knowledge Base.

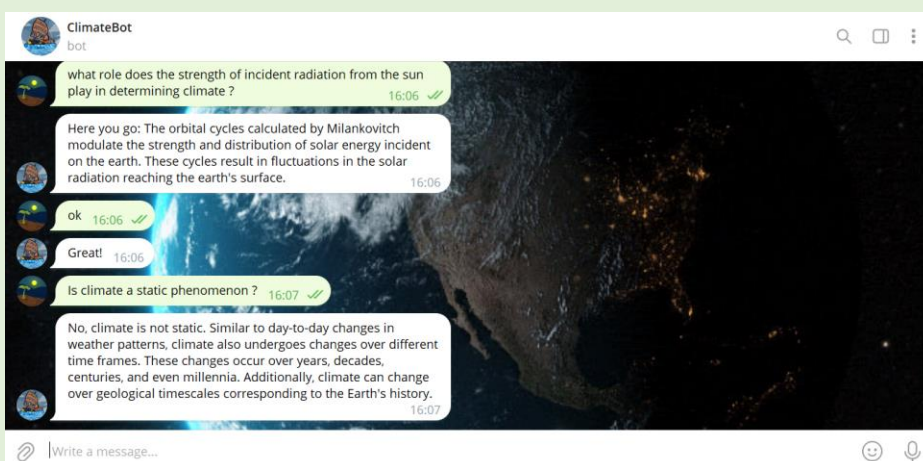

Initial screen of the bot:

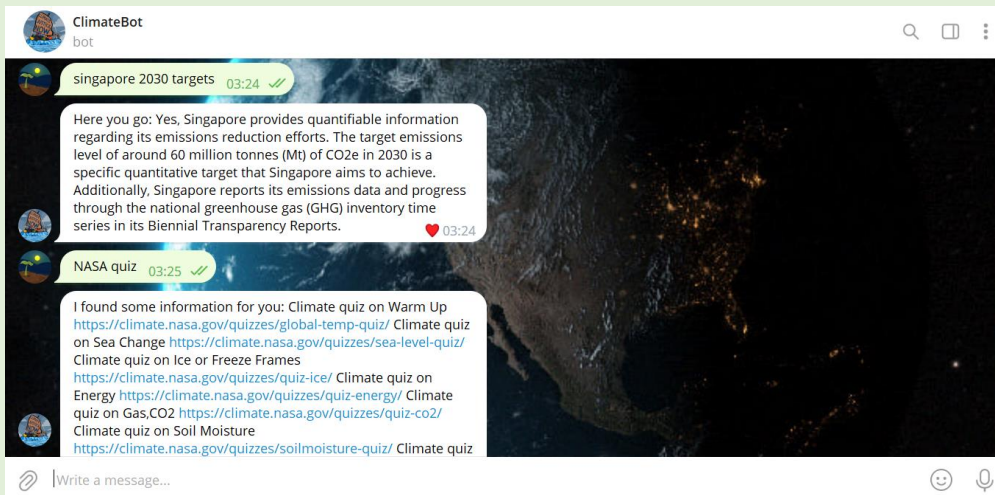

Initial interaction with chatbot started . Try with some initial keywords like climate change, El Nino, GHG etc.

Asking climate related questions

Some quizzes can be accessed here
